Q: How many pallets can be loaded in one container

A: Because of the nestable design, 1000-1500 pcs Pressed wood Pallets can be loaded

How to make the Pressed wood Pallet

First the wasted wood was put into the chipping machine and chip it to fine wood chips. The fine wood chips are dried by a dryer, then mixed with thermosetting resin, and placed in a press for compression molding. The entire production process is carried out under high temperature and high pressure to kill any insects and fungi remaining in the wood. At the same time, due to the high density of the wood products produced, it can prevent any other insects from reproducing and re-invading. This kind of molded product is "artificial wooden packaging material" instead of the traditional "solid wood packaging material". Its products no longer need to be treated with insects, and there are no live insects in the products. It meets ISPM15 (International Standard for Phytosanitary Measures 15). The demand for exporting wood packaging products, and after various service life cycle fatigue tests, can be shipped with the goods to other countries without any special treatment.

Attentions on stock and use of the Pressed wood Pallet

It is strictly forbidden to overload use. It is strictly forbidden to carry high-temperature items. It is strictly forbidden to place it in the open air for a long time. It is forbidden to place the load evenly, and it is forbidden to place it unevenly. When it is not used for a long time, it should be placed in a ventilated and dry place.
